REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: Neither Skotheim (U.S. 4,442,185) nor Han (U.S. Patent 6,150,605) leads a skilled artisan to the claimed multilayer solid-state device for producing electrical power from light. In particular, the recited conducting layer (or ultra-thin electrically conducting front contact layer) and the charge separation layer define a metal-insulator-semiconductor (MIS) junction. Note also that the conducting layer (or ultra-thin electrically conducting front contact layer) ballistically transports charge carriers (or electrical energy) from the light energy conversion layer to the charge separation layer. An example of the instant device includes light energy conversion layer (10), a front (metal) conducting layer (31), a charge separation layer (39) that has an insulator-semiconductor composite structure, and a back metal contact (30) (see Figures 3, 16, and 17; page 20, line 9 through page 23, line 10, of the instant specification). This provides the key feature of alignment of the majority carrier bands with the absorber donor level (see page 23, lines 4-10). Examples of typical MIS solar cell devices can be found in U.S. Patents 4,253,881, 4,342,044, 4,495,375, 4,828,628, 4,891,074, and 4,891,325. These typical MIS devices lack the instant light energy conversion layer/conducting layer/charge separation layer structure having the claimed ballistic transport.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
